Evan Warner

Senior Software Engineer

Noblesville, IN | (317) 412-4450 | evan.t.warner@gmail.com | https://evan-warner.com

SUMMARY

Senior software engineer building production Python systems focused on data, APIs, automation, and geospatial analysis. Expert in Python and SQL, with proven leadership architecting resilient applications, designing API integrations, setting technical strategy, and mentoring engineers. Experience with TypeScript and React. Track record of delivering Kafka and BigQuery data pipelines, API integrations, and automation, and of scaling systems to thousands of transactions per hour with high reliability.

SKILLS

Languages & Frameworks: Python, SQL, Django, FastAPI, Flask, TypeScript, React, NodeJS, Svelte, PHP

Backend & Databases: PostgreSQL, Microsoft SQL Server, REST APIs, GraphQL, BigQuery, Database Design & Optimization, Database Management, Schema Migrations, Query Tuning

Infrastructure: Docker, Linux Server Administration, Apache, GitHub Actions, Kafka

Architecture & Design: System Architecture, Microservices, Event-Driven Systems, API design

Tools & Practices: Git/GitHub, CI/CD, Technical Documentation, Code Review, Mentorship

EXPERIENCE

Senior Software Engineer, Bayer Crop Science — Sep 2022 – Present

Remote

- Built production AI and LLM features in Python, and used Cursor and Claude Code for code review, debugging, testing, and technical documentation
- Owned the roadmap for warehouse Python applications: set priorities with operations stakeholders, balanced features against delivery timelines, and aligned engineering with the business
- Architected and deployed Python and Node.js applications, including React.js + TypeScript user interfaces, REST APIs, SQL procedures, and processing services
- Managed PostgreSQL for warehouse applications: schema design, schema migrations, query and index tuning, and day-to-day database operations
- Designed high-throughput transaction processing in Python, with error handling, retries, and monitoring
- Improved reliability of those transaction systems through monitoring, failure analysis, and operational policy
- Built Python services that load data to Kafka for consumption into a Google BigQuery warehouse, connecting REST APIs and GraphQL
- Created event-driven Python services that watch Kafka topics and process incoming messages

Full Stack Software Engineer, Bayer Crop Science — Dec 2019 – Sep 2022

Remote

- Engineered Python backend services with object-oriented design and tuned SQL queries to handle thousands of requests per hour
- Debugged production issues across distributed Python services, SQL databases, and external APIs

- Refactored legacy Python and SQL applications, shipped schema migrations, and upgraded the stack so new features could be built on a maintainable codebase

Application Developer & GIS Specialist, Oct 2018 – Nov 2019

ATOS North America - City of Fort Wayne

Fort Wayne, IN

- Led feasibility assessments and effort estimates for new Python projects, aligning City of Fort Wayne stakeholders on scope, timelines, and success criteria before development
- Designed and managed SQL databases for Fort Wayne City Utilities, including schema design, data validation pipelines, automated reporting, and monitoring
- Shipped Python jobs and schema migrations that replaced manual validation, reporting, and database checks for City Utilities

GIS Specialist, Tippecanoe County Surveyor's Office Oct 2013 – Oct 2018

Lafayette, IN

- Built Python automation for geospatial data processing that reduced manual data entry and improved accuracy through programmatic validation
- Architected and managed county GIS geodatabases, including schema design for land records, infrastructure, and public services

PROJECTS

catholichabits.com | Co-Founder, Lead Engineer 2024

- Sole engineer and technical co-founder; designed and shipped a full-stack SaaS app with real users in production
- Built on Python, Svelte, TypeScript, PostgreSQL, and Redis; containerized with Docker and deployed on Linux via GitHub Actions
- Architected backend services including email queue processing, user progress tracking, and SendGrid integration
- Repository access available upon request

EDUCATION

Bachelor of Science, Agriculture | Geospatial Data Analysis (GIS) 2009 – 2013

Purdue University | West Lafayette, IN
